LinkedIn

TECHNICAL SKILLS

- C Programming
- Data Structures
- Layer 2 Protocols
- Layer 3 Protocols
- Switching
- Routing
- DHCP and DNS
- Linux
- Multithreading
- IPC Programming
- Unit Testing
- Troubleshooting
- Networking Fundamentals
- Bug Fixing
- VLANS and QOS
- Log Analysis
- NAT and MPLS

CERTIFICATIONS

- Problem Solving through Programming in C - NPTEL
- Internal Routing and Switching Examination - L1

SUMMARY

Experienced Network Software Engineer with strong knowledge of Layer 2 and Layer 3 networking protocols, including VLAN,STP,ARP,TCP,BGP,OSPF and Inter-VLAN Routing along with network services such as DHCP and DNS. Proficient in C programming, Linux, socket programming, multithreading, and IPC. Skilled in debugging, troubleshooting, log analysis, Root Cause Analysis (RCA), implementing code fixes, and validating software functionality in embedded networking environments.

EXPERIENCE

Wipro Technologies – March 2023 - December 2025

Client 1 : Alcatel-Lucent Enterprise

- Developed strong understanding of Layer 2 and Layer 3 networking concepts including TCP/IP, VLANs, STP, DHCP, ARP, OSPF, Inter-VLAN Routing, MPLS, routing, and switching protocols.
- Configured and validated Alcatel 6X and 8X enterprise switches by setting up Layer 2/Layer 3 network topologies and performing end-to-endconnectivity and protocol testing in lab environments.
- Analyzed and resolved issues related to Virtual Chassis, PoE (Power over Ethernet) modules, and flash memory failures through lab-based issue replication, troubleshooting, and debugging.
- Reproduced customer-reported issues in lab environments by building relevant network topologies, analyzing logs and system behaviour, and validating fixes against the reported scenarios.
- Diagnosed and resolved Layer 2 and Layer 3 networking issues, including VLAN misconfigurations, DHCP conflicts, OSPF configuration issues, and Inter-VLAN connectivity problems.
- Worked on Change Requests (CRs) by analyzing software and networking logs, performing Root Cause Analysis (RCA), implementing C-level code fixes, and validating functionality through manual and regression testing.
- Debugged and fixed C-based software issues related to buffer overflows and string handling functions by analyzing code, identifying root causes,and implementing code-level fixes.
- Collaborated with cross-functional development and testing teams to reproduce issues, validate fixes, and improve product reliability

Client 2 : First Abu-Dhabi Bank

- Monitored and executed end-of-day (EOD) and regional batch jobs (Control-M , VAM, manual batches).
- Validated successful completion of Murex, GL Posting, and region-specific jobs
- Re-initiated failed jobs and documented error logs.

LANGUAGES

- **English**
- **Telugu**

.

- Raised and tracked incidents using ServiceNow, coordinating with IT Operations, App Support, and Infra teams.
- Ensured on-time submission of UAE and Corporate Statements, validating data
- Maintained and updated EOD runbooks and process documentation

EDUCATION

.

- B.Tech , BVC Engineering College, Odalarevu (2018 – 2022)
  Graduated with an 8.62 CGPA
